

Socail Library

Authentication: you could access the site just if you authenticated

Registration and login accounts by password and unique email

Email: *****@student.birzeit.edu

Profile for each user account

Each user can upload post with png, jpg or JPEG image, .docx or .pdf files with title and description

Each post can make star on its or comment

Search by categories and sorted by most stars on posts and make pagination of the result

Follow the users and get notification when the user uploads any file and show the notifications by sort them by date and delete the oldest notifications (time to live 1 week)

Home page for show the different categories and photos strip for the highest rate profiles

For each profile you should show the number of stars and followers for that account

Make unfollow for the users

Administration page for the admins to let them accept the post or not and make comment for the action to let the user understand what happened

The user can just edit the title or description of the post

General Considerations:

Each Feature is a Django app

All List APIs are paginated.

Enable admin panel

Authenticate users using JWT token.

SQLite for local development Postgresql for production.

Using Docker for deployment.
